Rosewill RXN-AD7D 7dBi High-Gain Dual-Band Network Directional Antenna

Your Best Choice of Dual Band Antenna

Complaints about the poor signal of your Wi-Fi from a 802.11AC router? Why not try the Real High Gain Dual Band Network Antenna Stand of Rosewill. According to the research, the Wi-Fi range of 802.11AC is only half of 802.11n.

It means when you upgrade your wireless router to 802.11AC, the distance of your indoor Wi-Fi coverage is no longer the same as you were used to before. To help customers use the Wi-Fi conveniently, Rosewill launches a series of Real Dual Band Network Antenna products. Unlike the low cost and counterfeit dual band antennas, we test our network antennas rigorously to create ubiquitous indoor Wi-Fi environments for users. Still feeling annoyed with your Wi-Fi range? Give the network antennas from Rosewill a try.

Ma

Finally entire apartment is covered.

December 27, 2014

I have to say for the proce this item is amazing.
It is pretty sturdy and does what it suppose to do, which is to extend your WiFi signal in one direction. Coverage is of conic shape and goes toward where the face of antenna points. Face is where dots have no gap. One side has a gap, as if there was suppose to be a logo, other side has just dots, that other side with just dots is a face.
I have a stupidly designed apartment with a lot of corners and someone decided to put a kitchen right in the middle, while cable outlets in the most distant corners of the apartment. So if I put router in one room there is no way other room will get the signal, because it has to go through 3 concrete walls, microwave and fridge. Having like 20 other WiFi network around does not help either. This item solved my problems. I have 2 omnidirectional antennas plus this one for 5Ghz WiFi. I pointed this buddy toward the corner that does not get hit by omnidirectional antennas and now I get pretty viable signal around the entire apartment.
Yes it does work with both 2.4 and 5 GHz WiFi signal. And yes it looks and works just like that ASUS WL-ANT-157 5dbi/7dbi High Gain Dual-band Wireless Antenna. It's pretty much a good quality copycat of ASUS' directional antenna.

Squeeze out the most megabits per second you can!

I was skeptical that this little antenna would actually increase the range of my Asus RT-N66U router but after putting it on and streaming 1080p video from across my house without anymore dropped frames I am now a believer. It took a bit of trial and error but I found the perfect placement of the antenna. It seems to do best in the 5ghz frequency when it is attached to the left antenna slot and pointing in the exact location you need the best signal at. So give it a shot if you need to squeeze that extra Mbps across your house.
